CURRICULUM VITAE

Angelo Höngens

PERSONAL DATA

name:	Angelo Höngens
title:	ing/BSc (bachelor of computer science)
address:	** NIET IN ONLINE VERSIE **
postal code / city:	** NIET IN ONLINE VERSIE **
phone number:	+31 641666484
email address:	angelo@hongens.nl

date of birth:	** **, 1980
nationality:	Dutch
marital status:	Single, cohabiting
transportation:	Driver's license B (automobile, since 1999) and A (motorcycle, since 2004). In possession of own car.

EMPLOYMENT HISTORY

CAREER AND WORK EXPERIENCE

I started my IT career at NetMatch. NetMatch is an IT company specialized in e-business for the travel industry. NetMatch makes complex web applications built on the Microsoft platform (ASP.NET on IIS, MSSQL, etc), supported by open source software on Linux.

My work at NetMatch consisted mainly of systems administration and engineering tasks. I started out in 1999 as an ASP developer, and I soon grew into the only systems and network administration, doing a bit of C# development on the side. As my team grew, I implemented monitoring and alerting, and a ticket system to improve communications. We basically did everything from running cables and installing telephony systems to managing and installing servers, network devices, storage, balancers, switches, routers, etc. We were one of the first companies in The Netherlands to have a production network that was fully IPv6 enabled, and we were on the first to have applications running on the Microsoft .NET framework. Because of our technological expertise we (and I) were asked to give workshops and training.

In 2011 I switched career paths. I went from being a full-time sysadmin and a part-time police officer, to the other way around. I changed jobs because I wanted to develop my 'soft skills'. My full-time employment stopped at NetMatch, and I started working for them on a freelance basis. I still work in the same team, although I now focus more on architecture, complex troubleshooting and supervising. I also do some consulting, hiring and project management.

Together with my team, I am responsible for designing, implementing and maintaining NetMatch' network and systems infrastructure. This includes the 750+ node network spread out over Europe. NetMatch is still a very progressive company. This is demonstrated by the fact we're deploying Windows Server 2012R2 and CentOS7 on our newer projects and we're still advocating IPv6 to the rest of the world. For some of our projects we deploy an all-virtual approach with Microsoft's Hyper-V, for of our projects we run VMware.

CURRICULUM VITAE

Angelo Höngens

At the Dutch Police I do very little in terms of IT work: I patrol the streets at night to keep the city safe. However, besides my work on the streets, I now lead a project for implementing live streaming bodycams and I'm participating in a project to deploy a new mobile work environment.

ICT-RELATED KNOWLEDGE

hardware:	I am aware of the latest trends in hardware, specifically in the area of entry-level to medium servers (1 or 2 socket machines) and storage systems, and everything associated with rack hosting.
infrastructure:	I have a thorough knowledge of designing, installing, maintaining and troubleshooting networking hardware. I know quite a lot about TCP/IP (IPv4 and IPv6), DNS, Active Directory, SSL, IPSec, VPN's, firewalls, iSCSI, VoIP, etc. (on Windows, Linux/BSD or hardware devices like Cisco). I am specialized in high-performance and highly available web hosting.
software: platforms:	I have experience in managing and working with all flavours of Windows, Mac OS X, Linux (CentOS, RHEL), and FreeBSD. I have extensive experience with Puppet.
software: application servers:	I have over 15 years of experience with Microsoft's IIS and SQL Server, and I know a lot about Exchange Server, SharePoint, Lync Server, and open source servers like Postfix, Bind, Apache, Varnish, Squid, HAProxy, MySQL, Amanda, Nagios, Cacti, Asterisk, and more.
software: development:	I've developed in ASP.NET (C#) and ASP (VBScript) using Visual Studio and in Java using Eclipse and JBuilder.

LANGUAGES

Dutch is my native language, and I consider my English speaking and writing to be on a near-native level. I can understand and read most German.

ABOUT ME

I believe I have a strong personality with great analytic skills and a very broad range of knowledge. I can be decisive and firm when needed, and I can show leadership skills (although my ambition tends towards technical specialism instead of leadership).

PASSION

I like building things, from network architectures to web applications to security frameworks, and making sure whatever I build keeps running smoothly. I particularly like building large (web) applications, where scalability and high-performance components come into play, while still keeping everything cost-efficient.

FUTURE DIRECTION

In the future I want to do Cisco's CCNP, and perhaps one day CCIE certification, if I ever have the time. I also find Redhat's RHCE certification very interesting. I am also currently doing tests with cluster software like Ceph and OpenStack.

PERSONAL INTERESTS

I like hiking, running, jiu-jitsu, watching movies and playing around on my own server farm that I use as a test lab at home.
